

Benefits

- Increase your productivity and minimize your product development time with comprehensive, hands-on technical training
- Substantially reduce the learning curve associated with both hardware configuration and software operation
- Lower the cost of training a large group with Spectrum's on-site training option

Features

- Factory training courses at Spectrum headquarters or on-site training
- Training course content customized to your Spectrum platform configuration
- Highly successful training method combines lectures with at least 60% hands-on experience
- Highly qualified instructors with applications engineering experience

Description

Take full command of the capabilities of your Spectrum subsystem designs with comprehensive training courses and product orientations. Commence development immediately, simplify the learning curve and increase productivity with solid, timely and effective training delivered at Spectrum Headquarters or on-site at your facility.

Spectrum's training workshops are designed to get your team up and running in the shortest time possible by using a combination of lectures and at least 60% hands-on experience with your system. Our training methodology encourages you to apply your knowledge into immediate practice under the guidance of experienced engineers. This highly successful training technique gives our customers the knowledge they require to immediately commence application development upon course completion resulting in faster time-to-deployment.

[Technical Training at Spectrum Headquarters]

Send your development team to Spectrum to receive training from our Applications Engineers and meet the engineers who develop our products. This venue provides in-depth product training and application development guidance. Our facility is equipped to host all training courses to a maximum of 2 systems with 3 students each. Course scheduling is flexible based on our customers' needs.

[On-Site Training]

Spectrum also offers on-site training at your facility. A Spectrum Application Engineer will travel to your site to provide your team with a thorough training session*. We ensure your training covers foundational topics with customized content based on your system's configuration. On-site training provides an excellent opportunity to bring together engineers from different departments working on the project, thereby creating a common frame of reference throughout a project development team and setting the stage for improved communication at every phase of the development project.

[Third-Party Training]

Spectrum has successfully worked with third-party vendors to deliver combined training courses. This allows you to set-up your team for a single training event rather than managing the timing of separate courses. Further to this, we include training for third-party products when those products have been delivered as part of a configured system.

[System Orientation]

A highly-qualified Spectrum Application Engineer works closely with your team to familiarize you with Spectrum products. Product orientations include training coverage on development tools, software libraries and sample application code. The Application Engineer will provide training on the carrier cards and modules relating to your system's configuration.

* For larger development teams of over 6 people, two Spectrum Applications Engineers are required.

Standard Training Workshops

[Training]

| | |
|----------------------|---|
| Description | By the end of the workshop, you will be able to: <ul style="list-style-type: none"> • Design, develop, build and run real-time applications • Understand common programming techniques • Program the individual components of your system • Use third party software supplied with your system (if applicable) • Program with Spectrum's <i>quicComm</i>™ Software library • Design, develop, build and run SCA compliant waveforms (if applicable) |
| Duration | Contact Spectrum Sales for the duration appropriate for your system. Typical courses run between 2 to 5 days.* |
| Ordering Information | TRAINING-001 1 day training - Spectrum Burnaby TRAINING-002 1 day training - Onsite For more information, contact Spectrum at 1-800-663-8986 (North America) or 1-604-421-5422 (International), or email Support@spectrumsignal.com . |

*Note: Spectrum recommends that the training commence within 3 months of delivery. All training must be completed within 12 months of delivery.
